IF YOUR CHILD HAS:

AMBER symptoms

SEEK MEDICAL ADVICE AND JUST ASK: “COULD IT BE SEPSIS?”

RED symptoms

GET YOUR CHILD TO HOSPITAL QUICKLY

Dial 999 for an ambulance if necessary

This information is derived, with permission, from the SAM leaflet produced by NHS England (South West) to improve recognition of sepsis in children. Contributors include paediatricians, sepsis experts, nurses, GPs and parents of children who’ve had sepsis.

If you’ve been affected by sepsis, visit sepsistrust.org/get-support, or call 0808 800 0029 to speak to our specialist support team with many years’ experience. They’re passionate and dedicated to help those struggling with grief, having problems with recovery or trying to support a loved one.

Protect your child’s health. Just Ask “Could it be Sepsis?”

Kind thanks to 11 London for the design of this leaflet – we hope you found it helpful.

DN110016. Support Box 7th August 2020 Ver 1

The UK Sepsis Trust registered charity number (England & Wales) 1158643 (Scotland) SC050277. Company registration number 8844039. Sepsis Enterprises Ltd, company number 9583335. VAT reg. number 293333408.
What is sepsis?
Sepsis – sometimes confused with septicemia or blood poisoning – is the immune system’s overreaction to an infection or injury. Simply put, the body starts attacking its own organs and tissues. We don’t as yet, understand why this happens but if not treated immediately, sepsis can result in organ failure, amputation and death.

Whilst the majority survive, 25,000 children are admitted to hospital with sepsis every year in the UK.

Please use this leaflet if you’re concerned about your child’s symptoms, especially if their illness seems unlike anything they’ve had before, and they’re ‘just not right’ – even if their temperature falls again.

This information will help you monitor your child’s condition so you know:
- When to ask for help
- Where to go
- How to describe the symptoms

Some (but not all) children with these symptoms are seriously unwell.

Ask for an assessment TODAY from a trained health professional, and Just Ask: “Could it be Sepsis?”

Temperature
- Raised temperature (more than 37.5°C) for five days or more
- Shivering or shaking

Breathing
- Nostrils change size with each breath
- Breathing that’s noisy or sounds ‘crackly’
- Cough that sounds like a seal barking

Skin, Lips & Tongue
- Unusually pale skin
- Dry mouth, lips and/or tongue

Eating & Drinking
- Baby who is not feeding (taking less than half their usual amount of milk)
- Eating much less than normal
- Has vomited (been sick) more than twice in the last 24 hours

Toilet/Nappies
- More than five watery poos (diarrhoea) in the last 24 hours in babies younger than one year of age
- Only one wees or wet nappy in eight hours

Activity & Body
- Less interested than usual in playing
- Difficult to wake up or unusually sleepy
- Swelling of a limb or joint
- Not using/putting weight on an arm, leg, hand or foot

It’s sometimes hard to be sure about particular signs and symptoms. If you feel that your child may be seriously ill, or if something that concerns you is not on these lists, call NHS 111, contact your GP, or go to your local Walk-in Centre or Minor Injury Unit depending on your level of concern.
